Week 3 – IST777 Brain Warm-Ups

1. Here's a simple R command:

```
sample(1:10, size=14, replace=F)
```

Running this causes an error. Before trying the command, can you explain why it causes an error? What could you change about it to make it run without error? Send your answer in a chat message to me (not to the whole group).

2. Here's a histogram of a distribution:

Is this a distribution of raw data or a sampling distribution? How do you know? Send your answer in a chat message to me (not to the whole group).
